To implements Dashboards using tableau

Description:

A dashboard is a way of displaying various types of visual data in one place. Usually, a dashboard is intended to convey different, but related information in an easy-to-digest form. And oftentimes, this includes things like key performance indicators (KPI)s or other important business metrics that stakeholders need to see and understand at a glance.

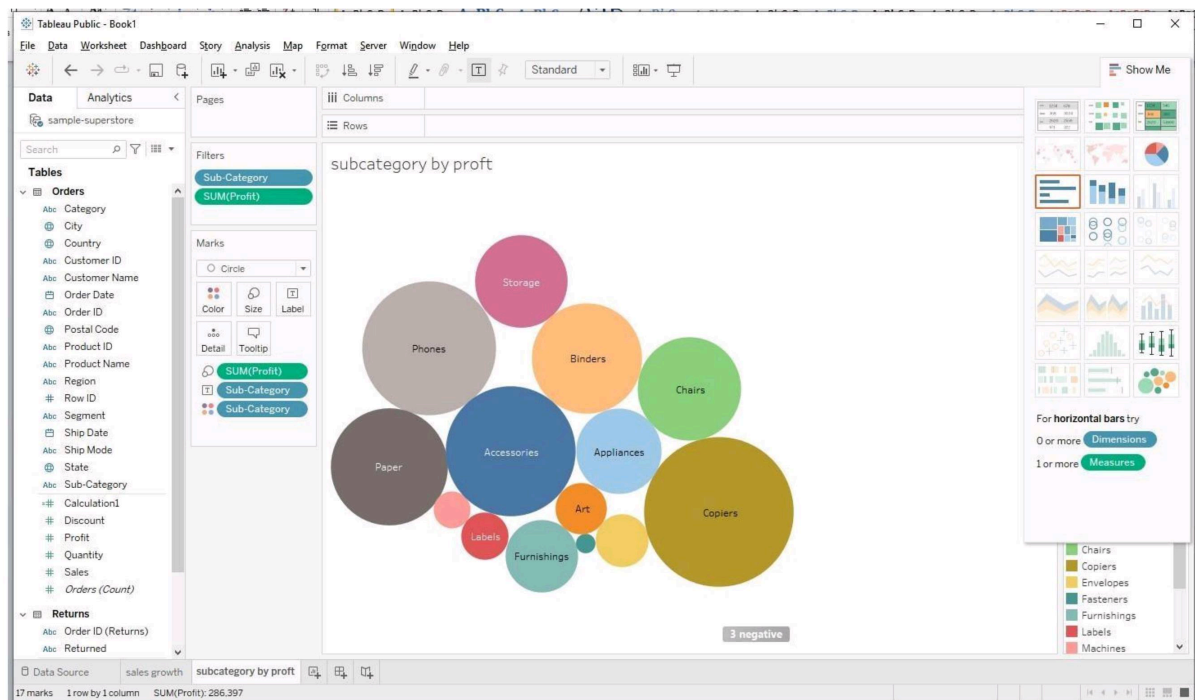

Dashboards are useful across different industries and verticals because they're highly customizable. They can include data of all sorts with varying date ranges to help you understand: what happened, why it happened, what may happen, and what action should be taken.

For example, category of sales across months in a year, region is the field added. The first view is shown below. This can be renamed at the bottom of the screen.

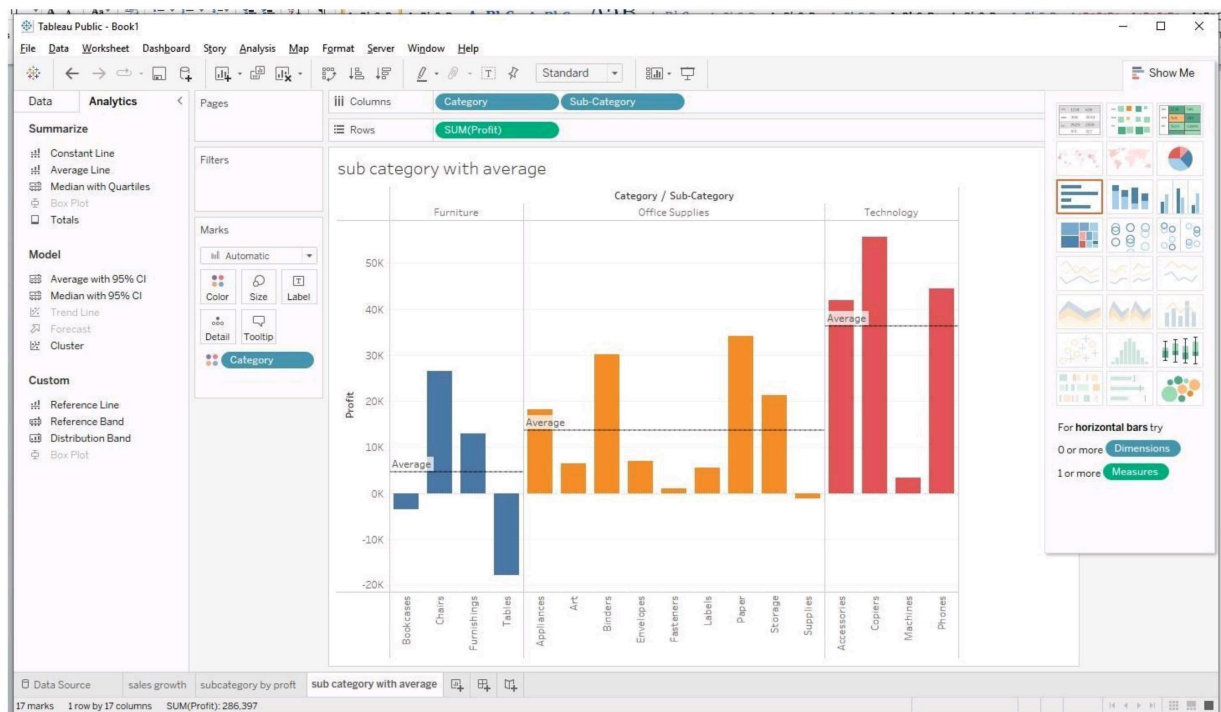

Now go to 2nd sheet for creating the 2nd view. The second view is shown below. A bubble chart was drawn between profit and subcategory. Then

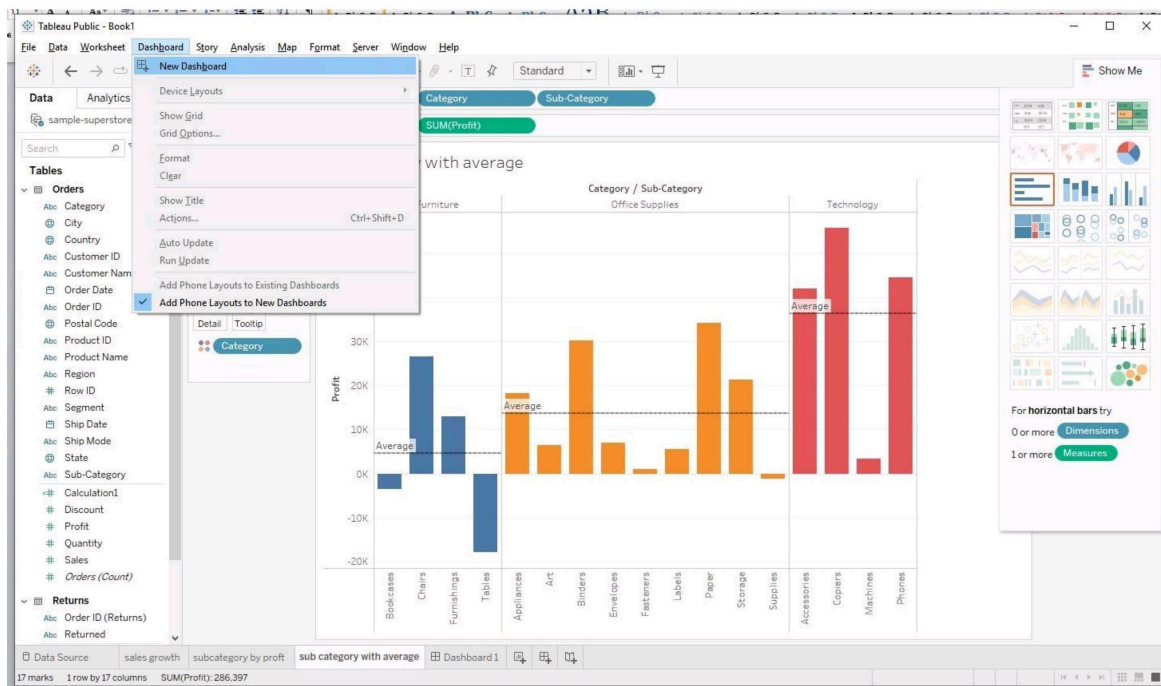

rename the sheet.

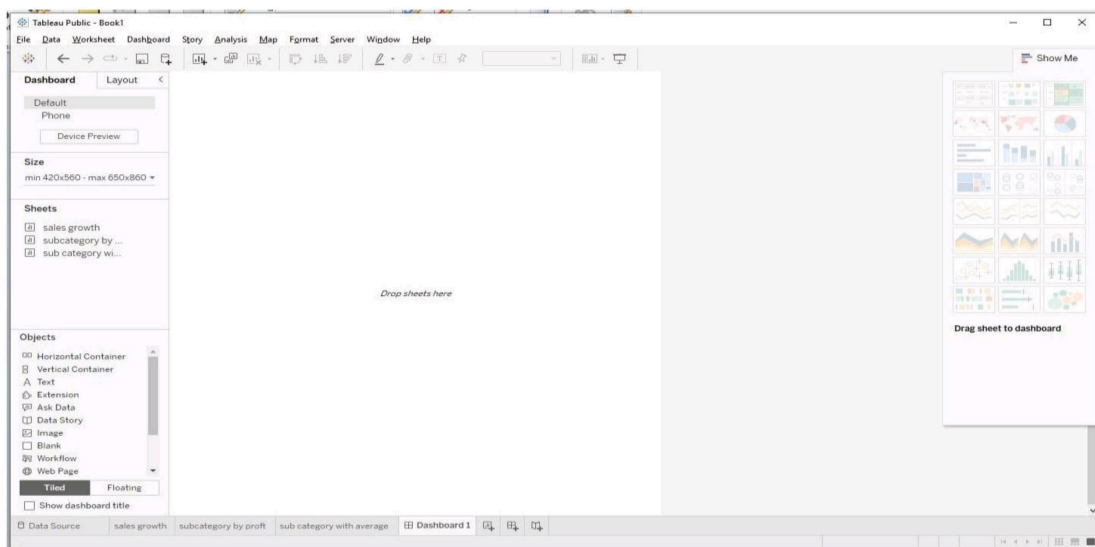

Next 3rd view is created as follows for profit for each subcategory in the category with averages.

After creating individual views, now a Dashboard can be created by clicking on create dashboard at the toolbar.

after clicking on new dashboard option, the screen is shown below.

now the sheets or views which are created earlier can be drag and dropped on this dashboard. The above three created views are placed in the dashboard as follows. One can follow their own way of importing sheets on the dashboard. After creating dashboard, title can be given to the dashboard from Dashboard tab. Dashboard can be customized in terms of its appearance by the user if required. Dashboard once created can be saved on users system and can be retrieved whenever required.
